

ADVANTAGES

- Ensures even ventilation, optimum temperature and safe operation
- Offers protection in the event of gas leakages
- Provides an attractive exterior
- Protects against fire and varying weather conditions
- Dampens noise from the gas turbine
- Facilitates servicing and inspection

Application

Turbomachinery Systems such as gas turbines, large industrial compressors, generators

Installation Options

Our enclosures are designed as an integrated part of the system. Lighting, easily maneuvered doors, lifting beams and space for lubrication and fuel systems are often built-in features in our designs. The load-bearing shell or the outer surface of the enclosure, which protect the sound proofing, are made of painted carbon steel, stainless steel or aluminum.
